

Building a Sustainable Future

Welcome to the Materials & Processes Laboratory at NASA's George C. Marshall Space Flight Center in Huntsville, Alabama. Here, we study materials of all kinds and how they can be processed during manufacturing. Our goal is to create the "right stuff" for building cool things like launch vehicles, space telescopes, robotic explorers, and inhabited outposts.

And you? Who might you be? Where do you want to go in life? These questions can be complicated and hard to answer. But if you like hard questions—plus engineering, science, and/or mathematics—then NASA needs YOU to become one of tomorrow's engineers, scientists, technicians, or support specialists.

Together, we can work to answer the big questions about the Earth, our solar system, and all the galaxies beyond. Come join us!
